AI Visibility & Structured Content Strategy

This website must be built to perform well with both human visitors and AI systems (ChatGPT, Perplexity, Google AI Overviews, etc.) that influence vendor research, shortlisting, and prequalification decisions. Vague, generic copy will cause Midwest Infra to be invisible in AI-assisted searches. Every page must be specific, structured, and terminology-rich.

Rules for all copy written on this site:

- Never write vague service descriptions. Always be specific.
 - ✗ "We provide trenchless rehabilitation services."

-  "We specialize in spray-applied structural lining for large-diameter CMP culverts, manholes, lift stations, and wet wells for municipalities and DOTs across Michigan."
- Every service section must name: the specific service, asset types it applies to, the problem it solves, and the environment it's used in
- Use industry terminology throughout: "structural rehabilitation," "CMP deterioration," "infiltration mitigation," "hydraulic capacity preservation," "load-bearing renewal," "trenchless technology," "cured-in-place lining," "polyurethane spray lining," "manhole rehabilitation"
- Geography must be explicit — state Michigan, reference Michigan DOT (MDOT), and mention service territories wherever relevant
- Municipal vs. DOT experience should be distinguished clearly where possible

Project Spotlight structure; this is on the homepage under the Project Spotlight section

1. Project image
2. Project title
3. View Project CTA

Use placeholder cards with this structure now. Real project data will be filled in later.

Project Format; each project page must follow this structure (page after clicking View Project):

1. Project context (location, asset type, scope)
2. Proposed solution (product and method used)
3. Project challenges (site conditions, timeline, access, deterioration level)
4. Final outcome (measurable results — linear feet lined, cost savings vs. replacement, timeline, etc.)

AI Visibility — Content & Messaging Guidelines

Who we serve:

- Municipalities across Michigan
- Michigan Department of Transportation (MDOT)
- County road commissions
- Private industrial and commercial clients

Geography:

- Primary service area: State of Michigan
- Certified SprayROQ™ partner for Michigan
- List specific regions or counties if known (add later)

Asset types we work on:

- Manholes
- Lift stations and wet wells
- Large-diameter CMP (corrugated metal pipe) culverts
- Storm sewer structures
- Sanitary sewer infrastructure
- Potable water structures
- Tunnels, tanks, clarifiers, digesters
- Secondary containment floors and walls

Application environments:

- Municipal sewer systems
- DOT culvert and drainage infrastructure
- Industrial containment
- Water and wastewater treatment facilities

Industry terminology to use throughout the site: Structural rehabilitation, CMP deterioration, infiltration mitigation, hydraulic capacity preservation, load-bearing renewal, trenchless technology, spray-applied lining, polyurethane structural coating, epoxy lining, cementitious lining, manhole rehabilitation, inflow and infiltration (I&I) reduction, asset life extension, non-destructive rehabilitation, no-dig solution

Preferred specific description (use this under Services): "Midwest Infra specializes in spray-applied structural lining for large-diameter CMP culverts, manholes, lift stations, and other critical infrastructure assets for municipalities and DOTs across Michigan — without excavation."

Platforms to maintain consistency across (note for client): Website, Google Business Profile, LinkedIn, any subcontractor prequalification databases (e.g., ISNetwork, Avetta) — all descriptions should match the language used on this site for maximum AI visibility.
